Bringing you the future of digital procurement

Integrating procurement practices can generate huge value, but it isn't easy. For many organizations, replacing legacy systems and fixing broken processes can be a daunting challenge. KPMG Powered Enterprise Procurement can transform your procurement function, bringing simplicity, savings, visibility, and integration.

Faced with empowered customers, emerging technologies, severe periodic disruption and a battle for skills, CPOs face important questions:

- How can we simplify our overly-complex approval processes?
- What is the best way to coordinate procurement activities and save time when creating and validating requisitions?
- How can big data deliver visibility, insights, and better outcomes?
- Can we integrate procurement and business processes better?
- Does digital transformation need to be disruptive, or is there a better way?

Built on KPMG firms' business-led approach to transformation and deep functional and industry experience, Powered Procurement is an outcome-driven functional transformation digital solution delivered via solution-and-service oriented cloud technology. It helps to deliver future procurement - today.

“ The week it [Powered Procurement] went live, the new system was accessed by 4,000 individual users and linked into by 874 suppliers. 2,900 purchase orders were generated and 2,800 invoices approved.”

— Global Banking Holding Company

Components of Powered Procurement

KPMG Target Operating Model

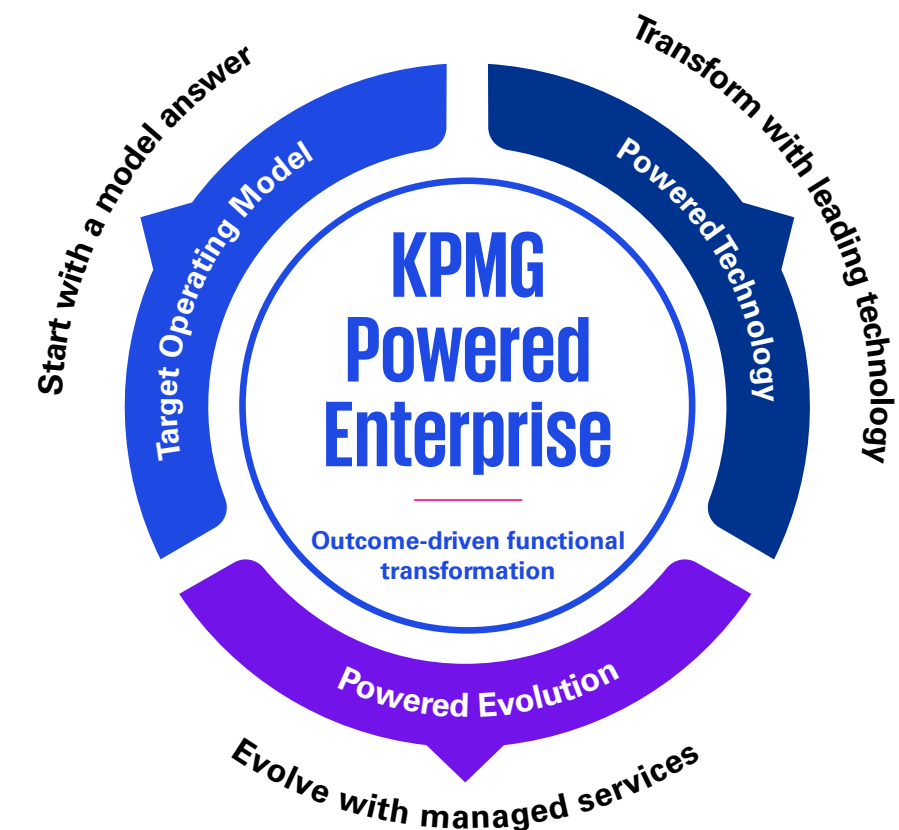

A holistic design of how your business works, the Target Operating Model includes six design layers and locks in KPMG professionals' knowledge of functional and industry best practice.

KPMG Powered Technology

Leading SaaS platforms pre-configured to reflect leading practice, are enhanced with pre-built digital assets that incorporate AI and advanced automation.

KPMG Powered Evolution

Managed services help drive improvement and realize the full value from the latest leading practices and technology innovations.

A model answer to help achieve results that matter

For sustainable procurement transformation, an efficient target operating model should extend beyond the traditional people-process-technology layers. The KPMG Target Operating Model includes six design layers and codifies our knowledge of functional and industry best practices

Governance

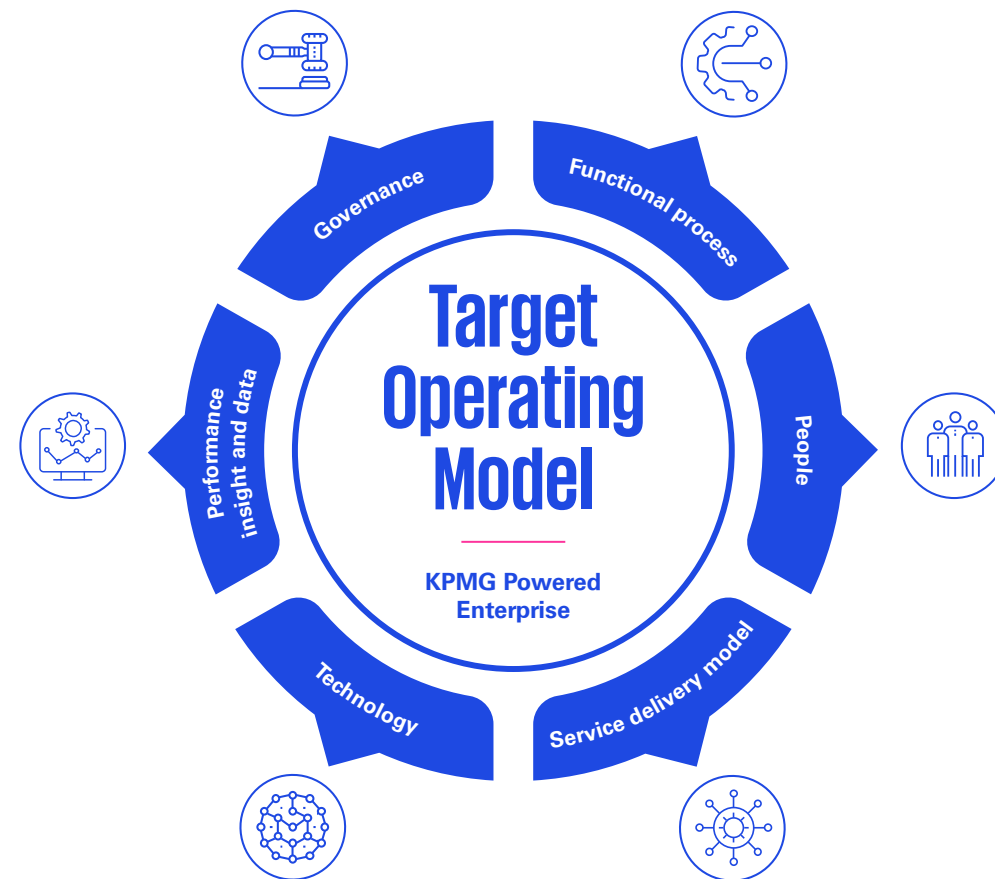

Risks, controls and security segregation requirements related to processes. Incorporates policies that help govern the processes and technologies.

Functional process

This is backbone of the Target Operating Model to which everything else relates. Incorporates leading practices, process taxonomies, process flows and maturity models that describe functional operation.

Performance insights and data

The data and analytics to inform decision making and support business performance with the related master data structures to enable these.

People

This layer intersects with Functional Process to describe who does what. It includes the roles, organizational relationships, competencies and skill requirements needed to execute all process areas.

Technology

Describes which technologies support what parts of each process, and how the technology applications are integrated.

Service delivery model

The model that defines where and by whom processes should be performed. It also describes incremental components required to run and operate a capability center.

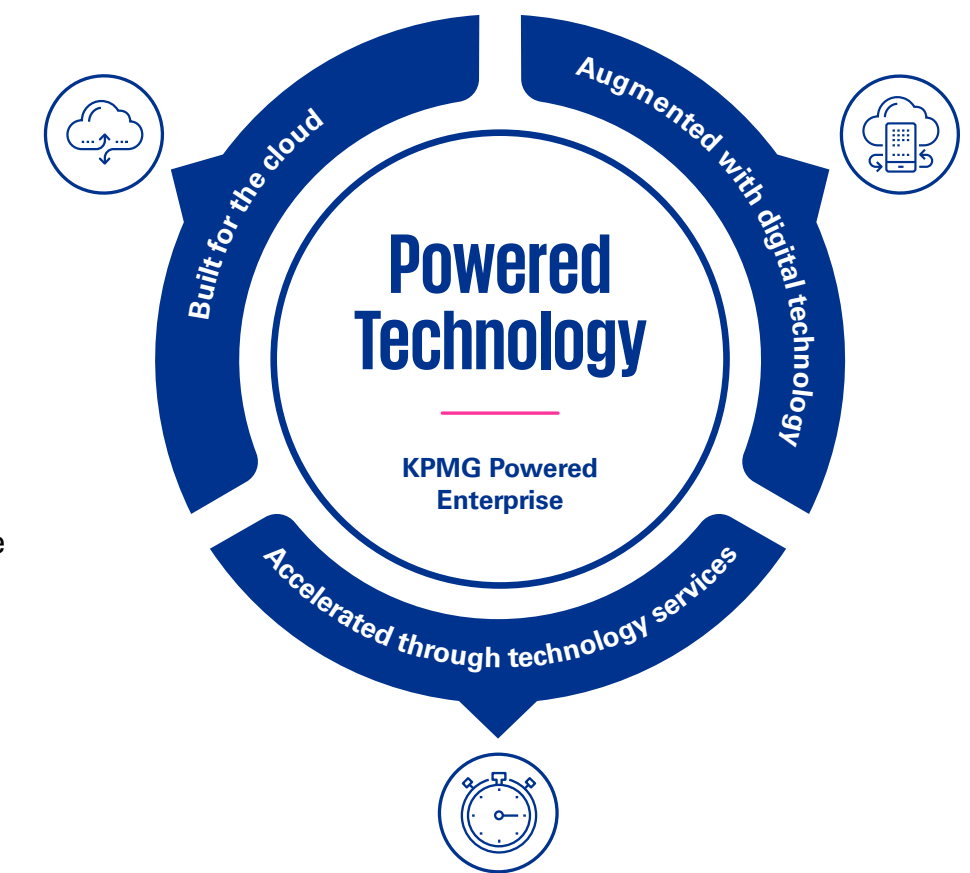

A technology-driven path to procurement transformation

Powered technology helps you realize efficient time-to-value because you start with a pre-built SAP S/4HANA solution that incorporates our industry-specific best practices in our Target Operating Model.

From day one, you can tap into leading practices and enhance your capabilities across all of the finance processes in your industry.

KPMG professionals can leverage a shared portfolio of digital use cases that demonstrate how to enhance specific process areas. From day one, you can tap straight into leading practice and deliver, from source to contract to requisition to pay:

- Value-add, supplier centric procurement
- Forward thinking and transformative category innovation
- A customer centric buying experience
- AI driven insights and analytics
- An adaptive and agile operating model
- Hyper-efficient workforce of the future

KPMG Powered Evolution—designed to help improve your business

A key advantage of Powered Procurement is Powered Evolution—an evergreen release cycle that keeps you current with leading practice and latest procurement TOM, together with the latest updates from your cloud provider. Powered Evolution’s innovation goes beyond technology updates.

Delivering results, collaboratively

KPMG Procurement transformation professionals use iterative delivery methodology and tooling. Underpinning this methodology is the Powered Execution Suite, which helps ensure consistent delivery across three key areas: program management, value management and change management.

Powered Procurement is designed to help you:

- 1 Transform the way you run your procurement operations
- 2 Build agile procurement functions that evolve as you grow
- 3 Help your people adopt and embrace change
- 4 Exploit new technologies for procurement value and performance
- 5 Drive future success with the latest procurement leading practice
- 6 Enhance service delivery and use of data for competitive advantage

For procurement leaders looking to unlock the power of data and create new opportunities that add value to the wider business, Powered Procurement can be a digital solution that works.
